This book provides a unique, in-depth

view of past, present and potential future climatic change in mountain regions, and in particular on the mechanisms which are responsible for this change. Other books which focus on environmental change in mountains focus more generally on the impacts of this change on mountain systems, rather than on the regional features of climatic change itself. The book enters into a high level of detail concerning results of international investigations which involve specialists from numerous climate-related disciplines. The book can be used in an academic and research context, for advanced graduate and doctoral students, as well as researchers working in various domains of relevance to climatic change issues. The book also has relevance in the context of future

activities of the Intergovernmental Panel on Climate Change (IPCC), in terms of providing up-to-date knowledge of fundamental mechanisms and consequences of climatic change in mountain regions.

For years, editorial and commercial photographer Zack Arias has been a respected and trusted voice in the photography industry. Known for his photography, his teaching, and his ability to connect with photographers, Zack has long had an “open door” approach to discussing his career—the ups and the downs—and in so doing has provided a straightforward and candid look inside the industry. By consistently showing great work and offering helpful

advice, he has built a large, loyal readership that looks to him for guidance in navigating the currents of a difficult and dynamic industry. Now, Zack finds yet another way to cut through the noise and offer truly valuable information to those struggling to make their way through the twists and turns of an ever-changing landscape. In Photography Q&A, Zack answers over 100 questions that he fielded directly from the public. These are questions that range across all aspects of the photo industry: gear, marketing, street photography, vision, pricing, branding, light, models, work/life balance, technical advice, and much more. From how to “put yourself out there” and start to get jobs, to how to get paid for those jobs when the client is slow to cut the check—and everything in

between— Photography Q&A answers many of the pressing questions that photographers are asking, but until now have not been addressed. The book also includes intermittent “Visual Intermission” sections—where Zack discusses individual images that were milestones in his development as a photographer—as well as worksheets on topics such as pricing and costs that help photographers to “know their numbers.” With all this material, and with insightful, honest answers that come straight from Zack’s experience as a photographer who has seen it all (or at least a lot of it), Photography Q&A is an essential resource for any photographer looking for the real answers to the real questions in the industry today.

The late Pierre Bourdieu's study challenges the assumptions of orthodox economic theory by showing how the market is effectively constructed by the state. He contends that supply, demand, the market and even the buyer are products of a process of social construction.

Financial innovation allows companies and other entities that wish to raise capital to choose from a myriad of possible instruments that can be tailored to meet the specific business needs of the issuer and investor. However, such instruments put increasing pressure on a question that is fundamental to the tax and financial systems of a country – the distinction between debt and equity. Focusing on hybrid financial instruments (HFIs) – which lie somewhere along the debt-equity continuum, but where exactly depends on the terms of the instrument as well as on applicable laws – this book analyses their treatment

under both domestic law and tax treaties. Key jurisdictions, including the EU, some of its Member States, and the United States, are covered. Advocating for a broader scope of application of HFIs as part of the financing of companies in Europe alongside traditional sources of debt and equity financing, the book addresses such issues and topics as the following:

- problems associated with the debt-equity distinction in international tax law;
- cross-border tax arbitrage and linking rules;
- drivers behind the use and design of HFIs;
- tax law impact of perpetual and super maturity debt instruments, profit participating loans, convertible bonds, mandatory convertible bonds, contingent convertibles, preference shares and warrant loans on HFIs;

- financial accounting treatment;
- administrative guidance;
- influence of the TFEU on Member States' approaches to classification of HFIs;
- interpretation of the Parent-Subsidiary Directive by the European Court of Justice;
- applicability of the OECD Model Tax Convention; and
- implications of the OECD Base Erosion and Profit Shifting (BEPS) project.

Throughout this book, the analysis draws upon preparatory works, case law, and legal theory in English, German, and the Scandinavian languages. In conclusion, the author considers tax policy issues, and identifies and outlines possible high-level solutions. Actual or potential users of HFIs will greatly appreciate the clarity and insight offered here into the capacity and tax implications of HFIs. The book not only examines whether

existing legislation is sufficient to handle the issues raised by international HFIs, but also provides an in-depth analysis of the interaction between corporate financing and tax law in the light of today's financial innovation. Corporate executives and their counsel will find it

indispensable in the international taxation landscape that is currently coming into view, and academics and policymakers will hugely augment their understanding of a complex and constantly changing area of tax law.
