In this 1999 book, Julie Candler Hayes offers an ambitious reinterpretation of a crucial aspect of Enlightenment thought, the rationalizing and classifying impulse. Taking issue both with traditional liberal and contemporary critical accounts of the Enlightenment, she analyses the writings of Denis Diderot, Emilie Du Châtelet, the Abbé de Condillac, Buffon, d'Alembert and numerous others, to argue for a new understanding of 'systematic reason' as complex, paradoxical and ultimately liberating. Hayes examines the tensions between freedom and constraint, abstraction and materialism, linear and synoptic order, that pervade not only philosophic and scientific discourse, but also epistolary writing, fiction and criticism. Drawing on the insights of a wide range of theorists from Adorno, Habermas and

Foucault to Deleuze and Derrida, she offers a dialogue between the eighteenth century and our own, an ongoing exploration of the question, 'what is Enlightenment?'

An outgrowth of Dosse's History of Structuralism, Empire of Meaning is an extended encounter with some of the most influential French intellectuals. Through interviews and readings, Dosse reveals what has become of the intellectuals of the generation of '68 as they have tried to work out the implications of their revolt against structuralism and the problem of cold war existence. Paul Ricoeur, Bruno Latour, Isabelle Stengers, Roger Chartier, Marcel Gauchet, Dany-Robert Dufour, and Michel Serres are among the many figures whose words and work unfold in these pages.

This study concerns the ideas of one particular philosopher, Henri Bergson, whose views of time, intuition, and creativity have had a significant impact on art, literature, and the humanities, both in his time and in our own. Although it is generally recognized that Bergson's ideas have significantly impacted the arts and the humanities, it has not been recognized how they have also had a creative influence on the sciences as well. Nor has it been realized that this was one of his most basic contentions.

Bergson's conception of intuition—his fundamental insight into reality—was not limited to fugitive insights into human existence. By realizing previously unsuspected possibilities for research and discovery, his endeavors were also meant to make possible new advances in the sciences. If it enabled his cousin by marriage, Marcel Proust, to explore human memory in depth, it also inspired psychologists like Daniel Schachter to use Bergson's ideas to make real contributions to contemporary memory science. If his notion of creative evolution brought many thinkers to a belief in human creative freedom, it brought others (notably Alexis Carrel and Pierre Lecomte de Noüy) to a scientific study of biological time. Among his successful speculations was the theory of the Big Bang cosmology. 'Getting Bergson Straight' shows many points at which Bergson's ideas anticipated future developments in the sciences. This was seen clearly by the Nobel

Prize-winning physicist Luis de Broglie who viewed Bergson's physics as presaging quantum physics. Thus, the text is well situated for arts, humanities, social science, and natural science classrooms studying creative thinking and/or intellectual history.

This volume is the long-awaited continuation of *The Religious Potential of the Child* (from 3 to 6 years old). The author, Sofia Cavaletti, founder of the Catechesis of the Good Shepherd, describes an approach to the religious education of children according to the methods of Maria Montessori, which has gained worldwide attention. In this book she draws on her long experience with children from diverse cultures and environments to describe the vital religious needs of the older child (6 to 12 years old). *The Catechesis of the Good Shepherd for the older child* builds on the foundation in Scripture and liturgy offered to the younger child (3 to 6 years old). The theme of the covenant between God and humankind, first revealed to the people of Israel, is expanded to include the dimension of time: all of history, from creation to the parousia. For the older child, awareness of participation in this covenant relationship leads spontaneously to a sense of moral responsibility, and of engagement with the cosmos in all its manifestations. This book will be a great help to educators and catechists who seek to understand the characteristics of the older child, particularly the child's relationship with the mystery of God.

Capitalism has been a controversial concept. In the second half of the 20th century, many historians have either not used the concept at all, or only in passing. Many regarded the term as too broad, holistic and vague or too value-loaded, ideological and polemic. This volume brings together leading scholars to explore why the term has recently experienced a comeback and assess how useful the term can be in application to social and economic history. The contributors discuss whether and how the history of capitalism enables us to ask new questions, further explore unexhausted sources and discover new connections between previously unrelated phenomena. The chapters address case studies drawn from around the world, giving attention to Europe, Africa and beyond. This is a timely reassessment of a crucial concept, which will be of great interest to scholars and students of economic history.

In this volume, some of the world's leading scientists discuss the

role of complexity across all the scientific disciplines. Opinions differ: for some, complexity holds the key to a deeper and fuller understanding of the world; to others, it is merely a modern version of the philosophers' stone.

The great diversity of contexts in which the term Postmodernism is currently encountered reflects the remarkable success of a coinage that has been in circulation for only about forty years. It has been used by philosophers, sociologists, art critics and literary historians to become, finally, a household word in the language of advertising and politics. Before letting it fade to a derelict cliché, an attempt is made in this volume of essays to use its potential as a cultural concept for the analysis and understanding of contemporary literature and thought.

This book examines mass marketing techniques in a political rather than economic context. The authors' thesis remains persuasive: democratic politics, precisely because it requires mass support for its legitimation, increases the need for public opinion to be channelized and focused. This is precisely the task of marketing in the political process. Increasingly, advanced societies are involved in symbolic rather than direct forms of struggle. As a result, management of ideas becomes crucial to both political survival and economic expansion. Romain Laufer and Catherine Paradeise argue that public opinion and media formation is built into the fabric of Western political culture, dating from the Sophists in ancient Greece through Machiavelli in the aristocratic baronies of pre-capitalist Europe. With the rise of

the bureaucratic-administrative state in the West, the need for persuasive public opinion analysis became part of the fabric of the advanced Western democratic and capitalist nations. The volume benefits from authors trained and familiar with the traditions of both the United States and Europe. They are able to consider contrasts in marketing styles as well as continuities of contents among advanced nation-states. No simple "how-to" manual, this bracingly different volume discusses its subject with an easy command of the philosophical and cultural literatures, as well as the major classics of economics, sociology, and political science.

The New Yearbook for Phenomenology and Phenomenological Philosophy John Wiley & Sons

With internationalization, the world is becoming smaller and the opportunity to meet people from other countries and cultures is becoming more common, providing the need for cooperation, shared knowledge, and cross-border trade. Individual cultures tend to understand themselves best and base their understanding of the world and its peoples on ideas they each have come to believe irrespective of reality, and thus make it difficult to reach a proper understanding of other cultures. This book considers intercultural understanding and co-action, partly by means of general insights into the concept of culture and the dimensions which bring about cultural differences, and partly as a methodology to analyze a certain culture - whether one's own or others'. This leads towards an understanding of cultural complexity and cultural differences among people. The book provides a discussion of a number of ethical issues, which almost invariably will arise when people meet and co-act across cultural

boundaries. Cultural Analysis offers a theoretical/abstract proposal for cultural understanding, intercultural plurality, and complexity.

This collection of articles presents the main contributions to the third LEST (Louvain Encounters in Systematic Theology) conference, held at the K.U.Leuven's Faculty of Theology, November 2001. Its theme, Theology and Conversation: Towards a Relational Theology, continues the explorations in contemporary theology as set out in the 1997 LEST I conference on The Myriad Christ (BETL 152) and in the 1999 LEST II conference on Sacramental Presence in Postmodern Context (BETL 160). In LEST III also, the plurality and diversity of theological approaches play a major role and the question is raised whether the contemporary theological endeavour in a global world contains in itself the tools to respectfully and constructively approach this diversity. The ideas of relation and conversation, as found in the theologies of the Trinity and of creation, as presupposed in ecclesial praxis, and as articulated in reflections that take their bearings from spiritual experience, provide a powerful means for renewed theological reflection capable of confronting plurality and diversity.

The End of the Megamachine provides a uniquely comprehensive picture of the roots of the destructive forces that are threatening the future of humankind today. Spanning 5000 years of history, the book shows how the three tyrannies of militarized states, capital accumulation and ideological power have been steering

both ecosystems and societies to the brink of collapse. With the growing instability of the Megamachine in the 21st century, new dangers open up as well as new possibilities for systemic change, to which everyone can contribute. Originally published in Germany in 2015 to great acclaim, Zero Books presents the first English language edition of *The End of the Megamachine: A Brief History of a Failing Civilization*. This book reports the proceedings of WIRN09, the 19th Italian Workshop of the Italian Society for Neural Networks (SIREN). Neural networks explore thought mechanisms that efficient computational tools and a representative physics of our brain share together and that ultimately produce the loops of our thoughts. The general approach is to see how these loops run and which tracks they leave.

Nobel Laureate Ilya Prigogine discusses the irreversibility of time and his findings impact on the laws of physics.

Advances in Chemical Physics John Wiley & Sons

Time and Consistent Relativity: Physical and Mathematical Fundamentals establishes a new and original theory of time relativity, which is fully consistent. It explains why Einstein's theory of time relativity is physically meaningless and mathematically based on tacit unacceptable assumptions, and why it represents the singular case from the mathematical point of view. The consistent relativity theory established in the book represents an exit from the situation created by Einstein's theory of time relativity. This original book presents novel results on time and its relativity that constitute the consistent relativity theory. The results are free of mistakes, inconsistencies, and paradoxes of Einstein's time relativity theory. The author's original discoveries and results constitute the new physical and mathematical fundamentals on time and its relativity. The book presentation is concise, clear, and self-contained. It covers the phenomenon of time and its properties and results in a definition and characterization of time. It enables the great variety of new

mathematical results presented in the form of theorems and their corollaries and specifies the necessary and sufficient conditions for the corresponding statements to hold. The proofs are rigorous. This book: Explains the physical nature of time Presents the definition and characterization of time Explains the physical sense of time relativity Rejects Einstein's time relativity theory as the general one Proves that Einstein's time relativity theory represents a singular case valid under tacit, physically meaningless and mathematically unacceptable, assumptions Generalizes and extends the Galilean-Newtonian meaning of time and its relativity Introduces various new classes of mathematical transformations related to temporal, spatial, and velocity coordinates and proves the necessary and sufficient conditions for their validity Discovers a great specter of new results on the time uniqueness, relativity, and temporal speed Discovers and proves a great specter of new results on the velocity and its transformations Discovers and proves a great specter of new results on the light speed and its invariance and non-invariance Discovers and proves the relationship of the light speed and the upper limiting speed Opens new directions for further research in physics and mathematical physics
