*Doing Autoethnography* CRC Press

The most lavish work ever produced on American long arms, this book has been published with the full cooperation of the Winchester Division of the Olin Corporation, as well as Winchester licensee, the U.S. Repeating Arms Company. The book's large format presents many of the firearms in exquisite close-ups, accompanied by substantial details of history, development, and significance. Variations within model groups are given ample attention, and the book's organization gives an unequalled overview of nearly a century and a half of Winchester achievement. A unique, comprehensive table in the appendix gives serial numbers and related production data previously unavailable in any one source. Every collector and enthusiast will delight in its broad appeal, with over 300 photographs in full color and more than 165 in black and white.

*Distributed Hydrological Modelling* Springer Science & Business Media

In 2011, Doing Autoethnography—the first conference to focus solely on autoethnographic principles and practices—was held in chilly Detroit, Michigan on the campus of Wayne State University. The conference has since occurred four additional times (2013, 2014, 2015, 2016). Across the five conferences, thousands of attendees from more than ten countries have participated in hundreds of presentations, more than a dozen workshops, and multiple keynote addresses. The chapters in this collection represent outstanding work from the five conferences. Together, authors interrogate autoethnography ethically, theoretically,

relationally, and methodologically. Readers will encounter many overlapping themes: identity norms and negotiations; experiences tied to race, gender, sexuality, size, citizenship, and dis/ability; exclusion and belonging; oppression, injustice, and assault; barriers to learning/education; and living with/in complicated relationships. Some chapters provide clear resolutions; others seemingly provide none. Some authors highlight conventionally positive aspects of experience; others dwell in what might be understood as relational darkness. Some experiences will likely resonate with many readers; others will feel unique, unusual, exceptional. In its entirety, the collection will take readers on an evocative, reflexive, and insightful journey.

*National Electrical Code* Springer

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Pollinators-insects, birds, bats, and other animals that carry pollen from the male to the female parts of flowers for plant reproduction-are an essential part of natural and agricultural ecosystems throughout North America. For example, most fruit, vegetable, and seed crops and some crops that provide fiber, drugs, and fuel depend on animals for pollination. This report provides evidence for the decline of some pollinator species in North America, including America's most important managed pollinator, the honey bee, as well as some butterflies, bats, and hummingbirds. For most managed and wild pollinator species, however, population trends have not been assessed because populations have not been monitored over time. In addition, for wild species with demonstrated declines, it is often difficult to determine the causes or consequences of their decline. This report outlines priorities for research and monitoring that are needed to improve information on the status of pollinators and establishes a framework for conservation and restoration of pollinator species and communities.
