In this addition to the critically acclaimed Scientist in the Field series, Dorothy Patent follows the scientists trying to put a stop to a gruesome disease before it's too late. Tasmanian devils are dying at an alarming rate from a type of tumor that appears to be contagious. What scientists are learning while researching the Tasmanian devil has potential to affect all animals, and even humans, as they learn more about how to prevent and hopefully

eradicate certain genetic diseases. In 1995, a deadly disease began sweeping across the Australian island state of Tasmania, killing every infected Tasmanian devil. The disease moved so fast that some scientists feared the species would be wiped out in the wild within a few decades. Where did this disease, named Devil Facial Tumor Disease, come from? What caused it—a virus, bacteria, or something else? How did it pass from one devil to another? What could be done to

fight it? When author Dorothy Hinshaw Patent learned of the race to save the devil from her friend, Australian geneticist Jenny Graves, she felt compelled to travel to Australia to learn firsthand from scientists what they were finding out about these iconic Tasmanian animals and what they were doing to help it from disappearing in the wild. Follow Dorothy as she takes readers on a fascinating journey into the Australian mainland and Tasmania, visiting parks and wildlife refuges

and joining geneticist, ecologists, and other researchers as they work tirelessly to save Tasmania's unique icon.

The World's Most Incredible Stories

Bearport Publishing
Sue doesn't want to be a kangaroo! She's sure there's something out there much better for her to be, so she goes off to explore. And sure enough, there are lots and lots of choices out there--but Sue's in for a surprise when she finally realizes that maybe a kangaroo is exactly what she wants to

be.

Weekly World News

Text Publishing
Animals and their symbolism in diverse world cultures and different eras of human history are chronicled in this lovely volume.

Tasmanian Tiger

Libraries Unlimited
Like the Sydney Opera House or Uluru, the kangaroo is a unique symbol of Australia. This is the remarkable story of our most famous marsupial, from its ancient origins and prehistoric significance to

current-day management and conservation. Marsupial specialists Stephen Jackson and Karl Vernes examine our sustained fascination with kangaroos--spanning 40,000 years--that allows these engaging marsupials to be instantly recognised by people the world over. The amazing diversity of this group of animals is revealed, ranging from tiny forest dwellers and tree kangaroos to large majestic animals living on the open plains of central Australia and the giant

kangaroos that once roamed the Pleistocene landscape. The authors also investigate the natural history of kangaroos - their unique reproduction methods, intriguing behaviour, varied diet and trademark hopping ability - all of which make them such fascinating animals.

South Australia Rough Guides Snapshot Australia (includes Adelaide, the Barossa Valley, Coober Pedy, the Flinders Ranges and Kangaroo Island)
Rough Guides UK

A handsome full-colour book pairing unique items from the Tasmanian Museum and Art Gallery with selections of original writing about the southern island. Indigenous dispossession, a cruel penal history, gay-rights battles; exceptional landscapes, unusual wildlife, environmental activism; colonial architecture, arts and crafts, a thriving creative scene—all are part of the story of Tasmania. And they find their expression in the unparalleled collection of Hobart's

TMAG. In *Island Story*, Ralph Crane and Danielle Wood select almost sixty representative TMAG objects: from shell necklaces to a convict cowl, colonial scrimshaw to a thylacine pincushion, contemporary photography to a film star's travelling case. Each is matched to texts old and new, by writers as diverse as Anthony Trollope, Marie Bjelke-Petersen, Helene Chung, Jim Everett, Heather Rose and Ben Walter. This is the perfect gift for anyone interested in the island

everyone is talking about. Ralph Crane is the author or editor of more than twenty academic books. He lives in Hobart and is Professor of English at the University of Tasmania. Danielle Wood is the author of *The Alphabet of Light and Dark*, *Rosie Little's Cautionary Tales for Girls*, *Mothers Grimm* and two non-fiction books on Marjorie Bligh, and co-author of the *Angelica Banks* series. She lives in Hobart and teaches at the University of Tasmania. 'While the twenty-four stories in this beautiful

anthology range from colonial to contemporary times, they have a common theme—a pervading sense of the landscape.' Age on Deep South 'The collection is strong...The editors pull no punches.' Sun-Herald on Deep South 'Offers readers a glimpse into the imagery and symbolism that has come to shape how outsiders perceive the island.' Australian on Deep South *New Virtual Field Trips* Bearport Publishing Once the world's largest marsupial predator, the

doglike Tasmanian tiger (*Thylacinus cynocephalus*) ranged across Australia and as far north as New Guinea. After humans introduced dingoes to the area 4,000 years ago, the misnamed "tiger" was driven to extinction everywhere except the island of Tasmania. With the arrival of European settlers there in the 1800s, however, its days became numbered. Unsubstantiated tales of its blood-thirst and its unnaturally savage attacks on sheep led to the creation of

"extermination societies" and ultimately to the introduction of a law in 1886 that mandated the destruction of the species. Hunted indiscriminately for fifty years, Tasmanian tigers were granted a reprieve in 1936, when the government was persuaded to protect the species. But it was too late: the last specimen died in a Hobart zoo two months later. In *Tasmanian Tiger*, David Owen tells the tragic story of the thylacine, from its evolutionary origins and its physical and

behavioral characteristics to its ill-fated encounter with European civilization and the ongoing fascination with the "Tassie Tiger" as a potent symbol of wildlife conservation. Elegantly written and full of interesting facts and first-hand stories from those who saw the animal in the wild, *Tasmanian Tiger* offers a compelling account of how fear and ignorance doomed an entire species over the course of a century. And in recounting numerous recent sightings of the

thylacine in Tasmania, Owen explores the power that this once-despised creature continues to hold on the imagination today. Indeed, as described in this book, serious efforts are being undertaken to bring back the Tasmanian tiger through cloning, a controversial project that raises a number of ethical questions for scientists and conservationists everywhere. For both those familiar with the thylacine and those discovering this remarkable animal for the first time, *Tasmanian*

Tiger is a poignant cautionary tale of human folly and the fragility of the natural world.

Vampires Pan

Who are we? Where are we from? These questions have troubled people for centuries. The textbooks have long taught us that human beings evolved from anthropoid apes. Today, a new science, molecular anthropology, tells us this: 7 billion human beings in the world share a common grand, grand...father, the Y-chromosome Adam, and share a common grand,

grand...mother, the Mitochondrial Eve. After reading information in this book, you will be convinced that human beings could not be the result of evolution, sudden mutation, or in any way related to the anthropoid apes.

Fascinating new insights into the famous Australian marsupial Packed with

information that has only been published in scientific journals, if ever at all, this collection of biological facts challenges the misconceptions associated with Australia's most famous marsupial. Far from being a scavenging, ferocious oddity, an image perpetuated by the infamous cartoon character, the Tasmanian Devil is actually a treasured and valuable wildlife species facing extinction. By sharing the surprising, controversial, funny, and tragic history

behind the world's largest marsupial carnivore, this new guidebo.

The Origin of Species by DNA Coding Taylor & Francis US

Dating back to at least 50,000 years ago, rock art is one of the oldest forms of human symbolic expression.

Geographically, it spans all the continents on Earth. Scenes are common in some rock art, and recent work suggests that there are some hints of expression that looks like some of the conventions of western

scenic art. In this unique volume examining the nature of scenes in rock art, researchers examine what defines a scene, what are the necessary elements of a scene, and what can the evolutionary history tell us about storytelling, sequential memory, and cognitive evolution among ancient and living cultures?

The Rough Guide to

Australia OUP Oxford

Describes the natural habitat, physical characteristics, diet, life cycle, and behavior of the red kangaroo, the world's

largest marsupial. *The First Domestication* Terry Domico Until the mid-20th century, the thylacine was the world's largest carnivorous marsupial, and its disappearance has left many questions and contradictions. Alternately portrayed as a scourge and as a high value commodity, the thylacine's ecology and behaviour were known only anecdotally. In recent years, its taxonomic position, ecology, behaviour and body size have all been re-

examined scientifically, while advances in genetics have presented the potential for de-extinction. With 78 contributors, *Thylacine: The History, Ecology and Loss of the Tasmanian Tiger* presents an evidence-based profile of the thylacine, examining its ecology, evolution, encounters with humans, persecution, assumed extinction and its appearance in fiction. The final chapters explore the future for this iconic species - a symbol of extinction but also hope.
